

How Chinese ink and wash techniques can be incorporated into films and animation

Yanbin Ma // 22043917

Design for Animation, Narrative Structures and Film Language (PU002323) Assessment –

Critical Report

Abstract

Both traditional Chinese art and film and animation are currently through a phase of fast development. France is where the art of film and animation first emerged.

Based on their mastery of conventional Western film and animation models, Chinese film and animation professionals have finally integrated the characteristic Chinese ink and wash elements into their film and animation creations after years of research.

The history of the ink and wash component is the main topic of this essay. In this essay, the history and relevance of the ink and wash components are discussed in connection to the traits of animation and film.

Along with character creation and composition, visual effects, and the significance of Chinese ink and wash elements in the growth of film and animation culture, it also analyses the qualities of film and animation art.

There is also discussion of the analysis and interpretation of Chinese ink and wash elements in the creation of films and animated shorts.

Introduction

Ink is used to make images on paper or silk in the traditional Chinese art form known as ink painting. By altering the pressure and speed of the brushstrokes, the amount of ink used, the type of paper or silk used, and how the ink is applied to the surface, the artist can produce a broad variety of hues and textures. Ink paintings are frequently distinguished by their brevity and sparse use of colour, as well as the artist's deft and expressive brushwork. Ink paintings can cover a wide range of topics, but frequent themes include landscapes, animals, and characters from Chinese mythology.

Since the Lumière brothers' first motion picture was released in 1895, cinema and animation have developed and reached every country in the world, including China. In order to produce films more effectively, China's film and animation industries have also advanced to the level of complete technology. Chinese ink and wash elements have been quickly pushed and employed in this way in order to develop the national culture and make the art of film and animation more acceptable to the general audience in terms of aesthetic and cultural needs.

This paper discusses how ink elements can be used in film and animation in a good combination by analysing the characteristics of ink elements and film.

Literature Review

S.-a.Xia (2012) mentions that Chinese calligraphy is approaching 50 years since the birth of ink and wash animation. Chinese ink painting in its most traditional form and animated media features are the ideal complement to each other. Classic paper ink animation, which conveys the 'picture' and 'mood' of Chinese ink painting, remains at the heart of paperless ink animation.

Ruirui,Z (2012)claimed that people have been pursuing the status of Chinese art, but frequently a screen is required to set the mood and environment of the room.

Ink animation perfectly demonstrates the fresh, ethereal and refined effects of Chinese ink painting in full bloom effect, greatly enhancing the artistic style of Chinese animation and its presentation, and earned global respect for Chinese animation. The concept , as summarized by Xuemei,Y(2016)

According to Shuang,L(2021), Director Li Ang skilfully blends distinctive Chinese culture (Chinese calligraphy, scenery, martial arts, etc.) with "Crouching Tiger, Hidden Dragon" in order to accentuate the allure of the oriental culture of the movie. Together, the play's protagonists and the audience are transported into a fictitious Chinese landscape painting that reflects the "natural oneness" of nature and humanity.

The Evolution of 3D ink films and animation

In the traditional Chinese art form of ink, ink is used to paint images on paper or silk. By varying the pressure and speed of the brush strokes, the amount of ink used, the

type of paper or silk used, and how the ink is applied to the surface, the artist can produce a wide variety of tones and textures. Ink painting is often characterised by its simplicity and sparse use of colour, as well as the artist's deft and expressive brushstrokes. Ink painting can cover a wide range of subjects, but common themes include landscapes, animals and characters from Chinese mythology.

Modern digital technologies are bringing film and animation into the public eye in this age of cultural upheaval, greatly enhancing the visual diversity of the audience while also encouraging new artistic advances, Shuang.L argues that.

The art of film has advanced significantly since the Lumière brothers' 1895 release of the first motion picture, and with it, China's film and animation industry has reached a mature and sophisticated level. The improvement of national cultural characteristics has been a key goal in order to better make cinema and animation art appealing to the public in terms of aesthetic needs and cultural needs. In this context, Chinese ink and wash elements have been swiftly promoted and used in practice. The addition of ink elements to creation has brought about unheard-of changes to China and even the world of film and animation. This has resulted in a leap forward in the application and dissemination of traditional Chinese art, making it more widely used and appreciated today. Therefore traditional Chinese art is now more widely used and appreciated.

The role and significance of ink and wash techniques in film and animation

Chinese ink and wash elements play a significant role in movies and animation, modifying the visual effects and upending the conventional film paradigm. First off,

traditional Chinese culture is passed down and promoted thanks to the potent propaganda effect of film and animation. As a result of the film's strong propagandist effect, which enables it to preserve and further develop the flavour and connotation of traditional Chinese culture, both old cultural forms and the spirit of modern film and animation are created. Second, Chinese artists have developed a wide range of brush and ink variations over the years by continuously advancing and innovating their brush and ink techniques. For those working in film and animation, the diverse brush and ink techniques that have been developed are a major source of inspiration.

The film's structure and tone primarily reflect the visual effect. The form and atmosphere of the movie serve as major visual cues, and the simplicity and vibrancy of the ink and wash elements serve to frame the overall visual experience.

The clarity and vividness of the ink pieces frame the overall visual experience of the work. It exemplifies the growth and incorporation of art, completely utilising the distinctive qualities of ink art and realising the ideal fusion of ink components and film technology. The ideal fusion of film technology and ink components.

The primary visual elements of traditional ink painting are dots, lines, and surfaces. This is strongly related to the concept of a "visual effect," which provides the general population with enjoyable visual experiences. One of the key components in the art of film and animation is the visual effect.

One of the most crucial elements of film and animation is the term "visual effects," which is closely related to what is being said. The confluence of visual effects demonstrates the relevance of this. the fusion of cultural elements and aesthetics.

Chinese animation is where traditional Chinese ink and wash components first appeared. Chinese animated films introduced the traditional ink and wash components first, also expressing the distinct visual culture and feel of ink painting. The use of ink is a classic artistic technique. The use of ink and wash as a conventional medium for creative expression has steadily. The ancient aesthetic expression of ink has slowly but surely made its way into different art forms and has been successfully interpreted.

The public now pays more attention to the aesthetic and cultural experiences that film and animation art provide for people in our fast-paced digital world. Chinese ink and wash art is a style of painting with distinct Chinese characteristics that has undergone a lengthy history of development and several stages of growth. The second is the performance qualities of ink and wash painting, which are good at expressing artistic characteristics that are like but not like, i.e. imagery, an imaginative effect that can give rise to rich associations, in line with the aesthetic ideal of Chinese painting that focuses on mood. The combination perfectly captures the cultural significance of ink art and communicates to the audience the visual effect of shifting levels of realism, imagination, and beautiful composition, reflecting the subtle and understated beauty of film and animation works and adding to the vividness and concreteness of the story in the movie, which is a novel reform.

The use of ink technology in film

Ruirui,Z (2012)claimed that people have been pursuing the status of Chinese art, but frequently a screen is required to set the mood and environment of the room.

Shuang,L argues that in "Crouching Tiger, Hidden Dragon," Director Li Ang makes considerable use of the basic components of Chinese landscape painting and deftly blends distinctive Chinese culture (Chinese calligraphy, landscape, martial arts, etc.) to underline the allure of the oriental culture of the story. Together, the play's protagonists and the audience are transported into a fictitious Chinese landscape painting that reflects the "natural oneness" of nature and humanity.

"Tao","Qi", "Heart","Dance","Enlightenment" and "Harmony", Through the use of these visual effects in the form of traditional Chinese ink and wash elements, Ang Lee depicts to the world a China with a traditional humanistic spirit and profound cultural merits. This not only offers Western audiences a new perspective on Chinese traditional culture but also gives Chinese traditional culture a good opportunity to flourish. Additionally, it offers a great chance for Chinese traditional culture to interact with the outside world.

Conclusion

The integration of the arts of film and animation into people's lives today, the presentation of an expanding number of good motion pictures and animations, and the general public's growing appreciation of these works create a greater challenge for those who work in the film industry. We can only be exposed to more films with modern and national features by fusing traditional art forms with cutting-edge technical innovations. The creation of movies and animation for Chinese film and animation industries, understanding how to use ink and wash elements has become a

crucial issue. So that this aesthetic component with Chinese characteristics can be passed down and developed in the development of cinema and animation culture, we should pay attention to the development of ink and wash elements.

So that this aesthetic component with Chinese characteristics may be transmitted and developed in the development of cinema and animation culture, we should pay greater attention to the development of ink and wash elements. Ink and video, this new genre of artistic expression Traditional Chinese art has received a fresh lease on life thanks to this new form of artistic expression, which has also provided the entire The trajectory of the film and animation business has changed.
